

THE RESEARCHER'S OWN BROWSER · client-side only

GET — the researcher's own click

1 Set query

Thresh builds the exact Reddit .json URL (sort, window, keyword, limit)

2 Gather

Researcher opens it in a normal tab, selects all, copies; 100 posts per page

3 Paste

reddit.js parses locally; specific, plain-language error messages

reddit.com

Public .json pages served to a person.
No API key, no proxy

copy

Harvest

Tables, stats; comments per post, by hand

Winnow

Volume, word frequency; optional AI

Glean

CSV / JSON; pseudonymized by default

Seal

ZIP: data + provenance.txt

AI Worker

Optional; the only Thresh server. Gets ≤50 titles/bodies, no usernames

only if AI features are used
